

SWEET EDITION-Online CAKE Delivery WEBSITE

Full Stack internship Project

Presented by- Pooja Shinde

OVERVIEW:

- **Online Cake Ordering website** will make a person's life easier in a dramatic way. If a person wishes to buy a cake, that person just has to go to this website, select the cake, provide some important information and make the payment and BAM! the cake would be at their doorstep.

My idea is to provide each and every people out there to have a "fun" party on different occasions. The customers can order instantaneously across anywhere around the area, anywhere they want.

This website have different categories like by flavour, By type, Designer cakes, Anniversary, occasion and many more. So depending upon categories user can select any cake.

LANGUAGE AND SOFTWARE TOOL:

- HTML&CSS
- Bootstrap
- JavaScript
- React & Node JS
- Mongo DB

FLOW OF SYSTEM:

GOALS:

- This website have two main module: Admin and user.
- Admin can login and make modification whenever required.
- User:
 - Login Page- User can log in this page
 - Home Page: User can see and buy may product(cakes) as they want.
 - Product details Page: User click on product,he/she can see details.
 - Cart Page: User can add any product in cart.
 - Payment/checkout Page: User can fill required details and make payment.
